- Working on Continual Machine Learning to turn any machine learning model into a “lifelong learner”. I am focused on addressing the problem of “catastrophic forgetting” for machine learning models with provable guarantees of convergence. My work primarily focuses on significantly mitigating this issue, ensuring that trained models maintain high performance levels across both new and old datasets. This approach allows for seamless model reuse by eliminating the need of extensive re-training even when the underlying data distribution changes. This work also tackles the issue of data heterogeneity with data privacy preservation through “Federated” learning frameworks.
- I am also working on convergence analysis of robust continual federated learning under Byzantine attacks.
